Notes:

- Holes marked with "*" ended in mineralization.
- Hole EG-AM-12-031 was pre-collared in 2012 and completed in 2014.
- The intercept in EG-AM-13-038 is within oxide mineralization; all other intercepts are within sulphide mineralization.
- Non-significant results (NS) are defined as: less than 0.0005% Mo and less than 0.10 g/t Ag.
- Drill intersections are based on drilled core lengths and may not reflect the true width of mineralization.
